

Metamask has gained financial success, to its Swaps feature allowing easy cryptocurrency exchanges with a reasonable 0.87% fee. Recently, I discovered Tor Wallet, a new player that sets itself apart with a focus on privacy. It generously shares 50% of the Swap fee directly with users and offers extra perks like a 0.15% earning on transfers within the Tor network for TOR token holders and a 0.1% bonus on cryptocurrency swaps.

The question arises: Could Tor Wallet potentially replace Metamask in certain situations? The user-friendly features and clear fee structure of Tor Wallet make it worth considering as an alternative to Metamask.?
