

Hello,

I am new to Defi, and I started by using my eth on my ledger and staked them using Lido, so now I got on my ledger STETH tokens, now I would like to take these STETH and stake them using Yearn to maximize my APY, but when I get into Yearn using ledger or in my browser, I go to the vault and when I try to stake STETH it shows as if I have 0.00 STETH but my normal ETH balance is showing correctly.

Did anyone encounter this issue and has a solution?

Any help would be appreciated, I couldn't find a solution online.

Thanks!
