

It has been a while since I put SCRT in my wallet and staked it. I can see balance, stake and earnings and list of transactions. When I look at any of my individual transaction details on secretnodes.com there is a message that the chain is dead. My transactions are shown to be on secret-1 and secret-2

I originally used the Math Wallet on old computer but have imported into Keplr. If I try to send some SCRT to another wallet the transaction fails. How can I get access to my balance, rewards and staked amount without transactions failing?
