

Hi there!

I'm looking for feedback on the tool I've built that summarises what is happening across protocols and DAOs. My hope is that it is helpful for the Arbitrum community in keeping up to date, as well as helps people participate more in the community.

You can test it here: [The Arbitrum community | x23.ai](#)

Here is an example of the type of summary it provides:

[Proposal: Activate ARB Staking \(FINAL\) | Arbitrum](#) (saves nearly 1 hour of reading time)

[Arbitrum Code](#) (summary of the nitro-contracts

repository)

How can I make this tool better serve the Arbitrum community? Let me know either here or message me directly on Twitter/Telegram: daveytea
