

# Verify Signatures

Galadriel Verified Inference API provides LLM inferences results that are signed by the TEE private key. This page goes over the details on how to validate if the signatures are correct.

Please see the [quickstart](#) to get an LLM inference response

- 1 Install Sentence SDK

- 2 Call the verification code

Run the following code

What's next?

- To see more details about the API check out the full [API docs](#)
- To see how to verify the attestation [Verify Attestation](#)
