

Is there a way to upload numerai predictions processed by AWS Compute (based on the default instructions numerai provided) to NumerBay conveniently?

I somehow sold an old model, but I'm not sure the best way to pull those predictions from AWS. I am pretty sure it is saving a copy of each pred it uploads though if I can see the files. I found this resource, but was hoping there is an easier way since it's not intuitive to me what it is saying and I don't even know if it will help

docs.aws.amazon.com

Pulling an image - Amazon ECR

If you want to run a Docker image that is available in Amazon ECR, you can pull it to your local environment with the docker pull command. You can do this from either your default registry or from a registry associated with another AWS account. To...

I can just run scripts locally too, but that seems redundant. Thanks.
