

Hey!

This website is pretty cool. I thought I'd register and create a thread about bribery contracts. I released some work today that might be of interest to people here. i.e. how can smart contracts impact nakamoto-style consensus.

[Bentham's Gaze – 23 Jan 18](#)

[Smart Contracts and Bribes](#)

We propose smart contracts that allows a wealthy adversary to rent existing hashing power and attack Nakamoto-style consensus protocols. Our bribery smart contracts highlight:

The use of Ethereum's uncle block reward to directly subsidise a...
