

Ape Campaign: Ape Karts 3D

Abstract: Too many web3 games are overly complicated. We don't need to reinvent the wheel and build a game from scratch- rather we can take proven ideas and make a web3 version of them! Enter Ape Karts, a racing game where you can play as an Ape and use \$APE as the in-game currency.

Motivation - This would bring utility and burning mechanisms to the \$APE token thus making it more scarce.

Rationale - By making a game where people can spend their APECoin, we bring utility to the ecosystem and brand exposure to the masses in a fun, familiar way.

Specifications: The game will be designed in Unity and ported over to a playable web version. There will be two game modes:

Mode 1: Casual- Single player game racing against AI, no coins at stake./

Mode 2: Degen - 1V1 Game mode, both players can stake \$APE coin OR stake their Ape NFT. Winner gets the loser's money/NFT.

Steps to implement:

- Smart Contract designer: For the \$APE and NFT staking contract
- Web Developer: For implementing Unity game into the browser and multiplayer modes
- 3D Designer: To make the game assets
- Unity Developer: For in-game assets, 3D Design and fabrication of the code.
- Graphic Designer: For in-game menu's and other files

Timeline:

30 Days: Finish the Unity game, with proper assets and UI menus fixed. Smart contract completed.

50 Days: Complete the web version with working smart contract functionality. Ready for public use!

Overall cost USD:

Smart Contract (\$5000)

Web Developer (\$5000)

3D Designer (\$3000)

Unity Developer (\$4000)

Graphic Designer (\$3000)

Total: \$20,000 USD

Additional notes:

This concept won first place for the best use of APECoin at EthWaterloo [hackathon](#). People loved the idea, it adds so much use case for the token and can easily expand into more utility in the near future. I believe in starting with a simple, proven idea. This will be built by a transparent public figure, I'm not anon. You can see my tiktok [here](#).
