

I'm exactly using the command `npm install -g @enigmampc/discovery-cli`

to install it.

Here's some of the output:

```
npm WARN tar ENOENT: no such file or directory, open
'/root/.nvm/versions/node/v11.15.0/lib/node_modules/.staging/lodash-47f770d0/lang.js' npm WARN tar ENOENT:

```

Actually there are tens of rows indicating the “no such file or directory” error. Even adding the parameters `--unsafe-perm` or `--allow-root`

doesn't work.

I'm using node v11.15 with nvm and npm v6.13.0 on Ubuntu 18.04. And i also have tried node v8 LTS and v10 LTS.
