

Getting Started

Getting started with @brinkninja/widgets [Suggest Edits](#)

Widget API Key

To use the widget you need to get Widget API Key & Widget API Key Name. Please [contact us on Discord](#) to get yours!

Environments

The widget is made as [React](#) component, which means you can use it as component inside any classic React apps or in [NextJS](#) app.

To use widget in other frameworks you can use iframe installation which will be done soon.

Currently supported environments:

- [React](#)
- [NextJS](#) Updated 26 days ago
