

FlashGPT

FlashGPT is a powerful 'Siri-like' assistant tool that utilizes the power of OpenAI's GPT language model to simplify developer workload. Currently, FlashGPT has two main features: * Create solidity smart contracts and deploys them to Layer 1 and Layer 2 solutions such as AltLayer, Arbitrum, Ethereum, Gnosis, Polygon PoS, Polygon zkEVM testnet, Optimism and Scroll alpha testnet. * Deploy and customize AltLayer's Rollup FlashGPT has already been well received by the developer community. It was first developed at the ETH global hackathon Scaling Ethereum 2023, where we won prizes from Polygon and Scroll for the project.
