

For example, imagine the original block-chain of enigma.

Is it possible to get a consensus by solving multiple fragmented computational problems, earning rewards in the earliest order, leaving only that certificate in the 1st layer?

If not, please tell me the reason.

MODERATOR NOTE:

This post has been edited by a moderator.

Description of changes:

- I have moved this question from FAQ to Private Computation, because of the specificity of the topic
- I have changed the word “impossible” (used twice) to “possible” based on the context of the question.
- OP, please message Ainsleys if changes are not desired.
