

It is proposed to rotate one of the Emergency Brakes multisigs signers.

The 3/5 Emergency Brakes multisigs have been introduced to safeguard Easy Track and L2 bridges (specifically Arbitrum and Optimism). Please, follow [this link](#) for more details on multisig composition. Emergency Brakes multisigs can:

- [pause the Easy Track](#)
- [pause wstETH bridges to Arbitrum/Optimism on mainnet and L2 side](#)

Once paused, normal operations can only be resumed via Aragon voting. Emergency Brakes multisigs do not have the power to transfer any funds.

[@vsh](#) will depart the multisig leaving a vacancy, so it is proposed to rotate their address 0x2a96805188e583dd760785A0dE93128504DDd5c7

for [@theDZhon](#) (Lido on Ethereum protocol team) with address 0x59f8d74fe49d5ebeac069e3baf07eb4b614bd5a7

.

The vote to consent on the rotation will be made by token holders via snapshot voting in early September.
