

I have a question:

1. Is there use for a uni token residing on a cex (like coinbase) ?

Is there a mechanism to use these tokens to vote or stake or use them?

1. If not, what needs to be done to achieve this?

Like reaching out and collaborating with a cex to improve voting for a uniswap dex?

1. Why isn't possible to trade uni against a btc, eur, gdp pair, instead of only uni/usd on coinbase pro?

This has bothered me the most, why does coinbase forces you to use the simple expensive main swap. Instead of offering trading pairs at coinbase pro, like they do for most other coins.

That's why i am forced to transfer uni to a wallet and trade on uniswap

, send back to coinbase sell eth to eur...

Please! if coinbase is a part of uniswap as investor fix these issues. sir Armstrong i hope you read this.
