

Hey folks,

As you may have noticed, the Anoma specs have been taken down - we're finalizing them internally in preparation for the [Anoma RFC](#) later this fall, as we want to present a (reasonably) polished product for y'all. Currently targeting ~ November for the RFC launch, which will include lots of goodies and opportunities to contribute/collaborate. As we prepare, we'd love to hear any feedback you might have concerning:

- RFC processes for prior protocols - what have you liked? what not? what lessons can we learn?
- Questions you have about Anoma - which ones are most burning? what should we make sure to cover in the FAQ?
- Protocol specs you really like (or don't) - what can we learn from?

If you'd like to make sure you're kept up to date on the RFC program status, just subscribe to this thread - we'll drop updates here.

~ Cheers!
