

I propose to add the CRV token to GLP on Arbitrum and Avalanche.

I noticed that the BTC and ETH utilization is mostly low, so I would propose to reduce the BTC and ETH weight by 1% each and add 2% CRV instead. Curve is one of the most prominent defi apps, so I assume there will be some interest in leverage trading the CRV token.

This could make the GMX trading platform more attractive and increase the trading volume. Additionally, it would only slightly increase the GLP volatility if CRV is added with a weight of 2%.
