

I have been lurking in the Arbitrum governance forum and reading through various proposals and discussions. Being a token holder and keenly interested learning about governance model, I have been following the updates on how the newly formed ARB DAO is looking at handling governance and keeping it transparent, diverse, engaging and committed.

I always believed the DAO to be:

1. Collaborative
2. Transparent
3. Respectful
4. Decentralized as much as it can
5. Community and Stakeholder focused

I would like to see more active discussion and newer ways of cutting-edge governance proposal.

Will keep an eye to share my thoughts and experience.

Thanks
