

Session Key Manager

This module enables the use of sessions with session validation modules. The session validation modules can be deployed at different addresses. The validation modules themselves do not get implemented as modules themselves as they will all be managed by Session Key Manager.

Installation

- npm
- yarn
- pnpm

npm install @biconomy/modules yarn add @biconomy/modules pnpm add @biconomy/modules

Integration

```
const sessionModule =
```

```
await
```

```
createSessionKeyManagerModule ( { moduleAddress :
```

```
DEFAULT_SESSION_KEY_MANAGER_MODULE , smartAccountAddress : address , } ) ;
```

 For full implementation see [this guide](#) [Previous Multichain Validation](#) [Next Batched Session Validation](#)
