

ArgumentsDecoder

Library with gas efficient alternatives toabi.decode

Functions

decodeUint256Memory

function

decodeUint256Memory (bytes data)

internal

returns

(uint256 value)

Parameters:

Name	Type	Description
data	bytes	

decodeUint256

function

decodeUint256 (bytes data)

internal

returns

(uint256 value)

Parameters:

Name	Type	Description
data	bytes	

decodeBoolMemory

function

decodeBoolMemory (bytes data)

internal

returns

(bool value)

Parameters:

Name	Type	Description
data	bytes	

decodeBool

function

decodeBool (bytes data)

internal

returns

(bool value)

Parameters:

Name Type Description data bytes

decodeTargetAndCalldata

function

decodeTargetAndCalldata (bytes data)

internal

returns

(address target ,

bytes args)

Parameters:

Name Type Description data bytes [Edit this page](#) [Previous libraries](#) [Next](#) [Permitable](#)
