

Hello, dear community

Following repeating requests and recommendations by members and to provide transparency, we're returning to our good ways of periodically reporting our work for the benefit of the DAO.

This thread is where you'll find these reports.

What To Expect Here

Audit Reviews and Formal Verification

We will post the projects we worked on along with the security report (if done) and the formal tests we've created.

AIP Reviews

We will share a high-level summary and simple statistics on the AIPs we reviewed.

Our review process guarantees that:

- Suggested payloads genuinely reflect the desired intention raised for voting
- Potential implementation risks are identified and acted upon before execution
- Emerged proposals followed the DAO's formal process and adhered to the highest transparency standards

Advancement Related to Development Efforts

As we mentioned in our [renewal thread](#), we are developing tools that will enable us to do our work better and can be of interest to the DAO.

Since these developments are not part of the engagement and are developed on a best-effort basis, we will update only on significant releases that aren't too technical and from which we think the DAO benefits.

Misc

Any involvement that isn't included in the previous sections and may include:

- Actions related to us having guardian role(s)
- Involvement in incident response - Only if and after details are already public
