

I don't found the groups "feature\_litigant\_unsizable\_rhebok" , "feature\_subfusc\_furriest\_nervule" ,  
"feature\_smuggest\_galvanic\_memorial" , "feature\_shrinelike\_unreplaceable\_nitrogenization" ,  
"feature\_synodal\_feisty\_weave" belong to.

I refer to one of the groups: intelligence, charisma, strength, dexterity, constitution, wisdom, agility, serenity, sunshine, rain, midnight.

They aren't in any of these groups and when I check the position in the columns of the datasets I see the feature number are 14, 214, 414, 614 and 814.

Very strange...

Could someone check this?

Seems I have a problem reading the features.json or there is a true problem with this features.
