

Hoping for some guidance. I left SCRT tokens on a Math Wallet. Have not been able to access them in the last week. Wondering if there is a SCRT explorer that can tell me if my tokens have moved. I have an address for the wallet that is in the format: secret\*\*\*\*. I am assuming this is the public address (but frankly not sure). When I googled Secret Blockchain Explorer, it found a site where all the addresses look like ERC 20 addresses and it does not recognize my wallet address. The Math Wallet folks have not been too helpful. Any advice on how I verify if the tokens are still in the Math Wallet? I tried opening a new wallet and importing with the seed phrase with no luck. Thanks!!!
