

Hello everyone,I wanted to share a tool I've recently developed that might be useful for fellow traders here. I've created a position size calculator based on stop-loss (SL) levels, which helps to limit losses when opening limit orders. You can check it out here: <https://gmx-risk-calculator.netlify.app/> I used to rely on an Excel calculator during my trading sessions, and I found it incredibly convenient. However, I decided to make it even more accessible by creating a single web page for the calculator. It works great on mobile devices too, making it easy to use on the go.If you have any questions or need assistance with the calculator, feel free to ask. Your feedback is invaluable, so if you start using the tool and find anything that needs improvement or if there are features you think should be added, please let me know.Looking forward to hearing your thoughts and suggestions.
