

Hello dYdX community,

Please allow me to introduce you to AUDIT.one, one of the leading enterprise-grade blockchain infrastructure providers in South-East-Asia.

- Entity name & Location:

AUDIT.one, Singapore

- Infrastructure location:

Mostly Singapore, with backups across Asia

- Type of hardware & region:

Mostly cloud-based across various datacenters in Asia

- Team:

Two dedicated DevSecOps engineers with more than 10 years of experience. Various additional support DevOps & blockchain engineers available on a per-needs basis provided by Persistence Labs.

- Years of experience:

Running validators since 2019

- Best Practices:

Very comprehensive monitoring & alerting systems, laser focus on secure key management, and active communication are the 3 main things we'll never compromise on.

- Voting Framework:

We use [Monday.com](https://monday.com) to track all governance proposals and vote internally. Discussions take place in case of different opinions. We choose to abstain when we can't reach consensus internally.

- Additional roles:

We can run IBC-relayers, RPCs, etc

- Other contributions to ecosystems:

AUDIT.one has been a genesis validator for the Cosmos hub as well as for various of other networks. AUDIT.one is also the main infrastructure provider for the Persistence ecosystem. It provides deep proof-of-stake expertise, infrastructure such as relayers, RPCs, and even indexers. AUDIT.one has also made significant contributions in creating scalable testing solutions for cosmos-chain upgrades.
