

AIP Name:

[AIP-412: Streamlining Working Group Elections: Improved Second-Round Voting Strategy](#)

Implementation Status:

Pending

Implementation Date:

N/A

Author:

[@AllCityBAYC](#)

Abstract Summary:

This no-cost proposal provides a solution for an element of second-round voting during ApeCoin DAO Working Group elections that currently restricts voters to selecting only one candidate when multiple seats for the same positions are being filled.

To fix this, we propose changing the Snapshot Strategy to weighted voting

, which enables the option to distribute voting power among each of the candidates you wish to see elected.

It is important to note that we are already using this method of voting in the first-round of Working Group elections. Furthermore, under this format should you favour our existing second-round standard of single-choice voting

, you can still concentrate all of your voting power on one candidate. We're simply offering an alternative for those who wish to have a broader influence across all positions being filled.

Examples of other DAOs that utilize options to help voters to select more than one candidate when multiple seats are being filled include Arbitrum, ENS, and Optimism.

Overall Cost:

There is no cost to implement this proposal.
