

Hi Team,

I wanted to see how the community was feeling about the forks and copy cats currently coming out and if there are features, functionality, or assets you are finding interesting we should have on GMX. As an example I think we should have more assets on the protocol to trade that would be on the top 50 on coingecko at the moment. This would help drive more options for traders to trade or SWAPS at the best market price!

Any thoughts or opinions here?
