

Proposal Name: Building APE DAO medical center

Proposal Category: Ecosystem Fund Allocation

Abstract :

APE Community as a complete financial ecological community in Yugalab ecosystem, we believe APE DAO has a better vision than other communities and industries. At present, Yugalab has achieved unprecedented success in all cryptography ecology in the industry. At present, there are also cooperation from all walks of life. We are not a retail store or farm, but as a professional medical CBD team, We plan to use this proposal together with all members of APE DAO to announce to the world that the encryption industry is overturning the unreasonable status quo of the monopoly of the traditional medical industry. We are building an important medical system in the real world through data and community. Starting with APE DAO, we will establish new medical security and promote human health.

Motivation :

To enable APE DAO to prioritize a healthcare ecosystem built out of the cryptocurrency industry in the critical healthcare industry of the real world. Birth, aging, illness and death is a difficult problem that human beings have been unable to overcome so far. The monopoly of traditional medical industry has led to the development difficulties of many emerging medical institutions. Therefore, we want to change the traditional industry's perception of encryption industry through APE DAO and improve the medical security for more and more people.

Rationale :

We run the program as a DAO, which is co-managed by members.

All DAO members will be the first batch of experience groups and co-construction groups (such as after the plan, we will select 70% of APE DAO supporters and 30% of social users for priority experience), if the plan is carried out smoothly, we will also select participants who are interested in participating in the medical plan from the DAO members, we will train the technology and information of CBD medical aspects to interested participants in a professional training manner, enhance the technical value of the supporters themselves, and we will also use APE The DAO's identity cooperates with more medical institutions to make the program a perfect medical institution in the real world, thus generating greater value, such as after the successful implementation of the program, we will return to the APE DAO treasury in percentage of the profits obtained from the medical plan each year to provide mobility, making the APE DAO stronger, and also for more valuable proposals can be supported by the APE DAO, and finally APE DAO is out of the way in the WEB 3.0 industry to show the world that we have built an application with medical value.

The team behind the proposal (HAYC/HMI)

APE DAO medical center was initiated by the HAYC(HAYC Project was born from BAYC#420)project team and supported by CHINA HANMA GROUP COMPANY(HMI), a company focused on the entire cannabis industry chain, from cannabis cultivation and processing of cannabis flower leaves to the development of pharmaceutical products based on cannabis-based active ingredients. The company has filed more than 90 patents in the pharmaceutical field and has built the world's largest GMP-compliant CBD extraction plant.

HMI Group: China's first industrial hemp bio-extraction and separation base, also the first CBD R&D and sales organization, has an important position in medical care, energy, environmental protection and people's livelihood.

FEIXING China: Founded in 2009, China's first encrypted cannabis forum, providing professional cultivation/extraction/processing and other technical sharing, training a large number of technical personnel now engaged in the medical marijuana industry, had registered members reached 100000+. All Management team members joined HMI Group in 2016.

Key Terms (optional) :

We are currently conducting in-depth research and development on human endogenous cannabinoids and conventional medical cannabinoids:

CBD: Cannabinoid (CBD) is currently understood initially for its analgesic and anti-inflammatory effects, and cannabidiol produces analgesia. The pharmacological mechanism of analgesia is mainly related to CB1 and CB2 receptors. CB1 receptors achieve analgesia by directly inhibiting the release of gamma-aminobutyric acid (GABA) in the gray matter surrounding the midbrain aqueduct and in the RVM, as well as glutamate in the spinal cord. The effect of CB2 receptors is stronger than that of aspirin, which is well known and widely used.

In addition to its analgesic and anti-inflammatory effects, CBD is currently used in other medical clinics, such as epilepsy, anxiety, Alzheimer's disease, Parkinson's disease, early treatment of some cancers, etc.

CBG: Cannabigerol (CBG) has now been shown to inhibit the absorption of GABA, thereby inducing the relaxing effects normally associated with CBD, with excellent therapeutic effects in people with anorexia nervosa.

CBDV: Cannabidivarin (CBDV) has a favorable clinical impact on the excitatory and inhibitory brain systems in adults with

autism spectrum disorder (ASD).

Autism spectrum disorder (ASD) is a costly neurodevelopmental disorder, and clinical evidence that CBDV modulates the excitatory inhibitory system of the brain associated with ASD is, in our opinion, a significant medical finding for the large population of autistic patients.

As a professional team founded in 2009, we have 13 years of medical academic experience and clinical results, as well as standard cultivation, processing, extraction and production techniques, rather than the superficial understanding of the traditional industry of the crypto industry – 80% of cryptocurrency practitioners are Stoners. At present, our products in the traditional industry has more than 50 countries and regions of cooperation experience, recently we are also carrying out in-depth research on the human body of endocannabinoids CB1, CB2, CB3, in order to prove the importance of medical CBD in the future to the traditional medical community.

These are one of available HAYC's regular CBD products Analysis reports for compliance with FDA import/export standards and product manufacturing standards:

We will take CBD medical care as the basis to provide corresponding medical products for the demand group, and will also jointly build the medical plan into a medical ecosystem closer to the Life style through the resource support industry of various industries of the community members, so that the plan looks no longer as distant as the traditional medical industry, but more like a decentralized APE medical ecological community, where people will exchange information, generate new concepts, and jointly put forward new proposals for the healthy development of human beings. At the same time, we will also select people with common development goals in the industry from DAO supporters and YUGALAB series NFTs for more systematic professional training, so that more supporters can join the APE medical ecosystem with human health as the core.

Specifications :

We will use ETH Blockchain as the online platform where D.A.O members participate, and APE COIN as the financial system with decentralized governance. In Canada is expected to be the priority for the program (Canada is a cannabinoid across legal country), we also have legal license in the country and long-term medical business cooperation, and the country also has a huge encryption industry users and potential users, a large number of legal cannabinoid medical are recognized in the country.

Steps to Implement | The steps to implement the proposal, including associated costs, manpower, and other resources for each step where applicable.

We plan to begin the establishment of ape CBD medical centers and the public sale of NFTs following a formal partnership with \$APE DAO. As mentioned above, after the adoption of the proposal, we will begin to record the YUGALAB series NFT holders and \$APE DAO participants in the system and establish a medical file, and when the system is gradually perfected, it will be combined with the real medical industry to become a perfect medical center. Holders will receive airdrops of CBD-

related treatments or peripheral products from time to time, and will receive priority experience and preferential experience rights, while participants can also enter our CBD medical plans and peripheral plans through DAO governance to play a role in creating value for DAO. All the economic systems of the project will revolve around the \$APE COIN. Whether it is our peripheral products, activities or CBD medical system, we will use \$APE COIN as our ecological financial system. Peripheral products will be paid and settled in the amount of \$APE COIN, allowing the \$APE COIN ecosystem to be more widely diffused and circulated in the real-life and non-cryptocurrency industries, let more users hold \$APE COIN. At the same time, it will also transform more CBD proponents of the non-crypto industry into the \$APE COIN ecosystem, gradually expand the influence and practical value of APE DAO, and truly realize the combination of APE DAO virtual and real ecosystem.

If the proposal is successfully passed, we will allocate 30% of the funds to establish an ape physical center for social communication and medical R&D space, 30% for CBD medical products R&D and production, 10% for peripheral product airdrops, with the purpose of giving supporters the benefit of providing feedback on project support, 10% for rewarding outstanding contributors within the community (product development/promotion, etc., with the purpose of better promote subsequent ecological development and provide development opportunities with more visionary supporters), and 20% for the construction of a new ecosystem within the community (to implement excellent ideas and plans provided by APE DAO supporters, To reach more people to understand and generate consensus with APE DAO and join APE DAO).

*If any BAYC /MAYC holders are interested in licensing their Ape to APE DAO medical center

please tweet @0420.ETH

and start a conversation. We are exploring various linkage and collaboration possibilities in order to expand APE DAO's reach. We would like to license some Ape's and are willing to work with entrepreneurial BAYC holders to make proprietary products for these holders and show them in the APE DAO medical center's offline scene and in physical products.

Timeline :

If the proposal is approved, we will first carry out the steps of establishing an APE CBD medical center in Canada, a process of about 3-4 months, and at the same time carry out the construction of the APE CBD medical center, we will cooperate with artists and some other influencers in the medical industry to carry out offline social activities in various regions, this process will also be synchronized with the construction time, the purpose is to promote and publish ape CBD medical center information, and communicate with more cryptocurrency industry and NFT industry and CBD medical industry practitioners. Build a larger social network and the APE CBD Medical Center will be operational about 5 months after the proposal is passed.

Overall Cost :

\$500,000 APE COIN

Finally we will introduce you to the difference between medical CBD and recreational cannabis in a PDF for a better understanding :
