deleteStrategy()

...

CarbonController.sol Copy functiondeleteStrategy(uint256strategyId) external nonReentrant whenNotPaused
onlyProxyDelegate

...

This function is used to delete a strategy on Carbon DeFi. Once removed, all liquidity associated to the strategy is sent to the strategy owner's wallet.

Function Arguments

Name	Type	Description
strategyId	uint256	The ID of the strategy to delete.

Example

...

Copy deleteStrategy(2381976568446569244243622252022377480199//strategyId)// Only the strategy owner can delete the strategy

...

While all required data is available on chain, it is recommended to use the[Carbon DeFi SDK](#) . [Previous updateStrategy](#) [Next Read Functions](#) Last updated1 month ago
