

Select Widget Variants

Customize your experience with our versatile variants. LiFi Widget comes in three variants - default, expandable, and drawer. Variants allow customization of the exterior of the widget, like the side panel for quotes or drawer. There are also several subvariants - default, split, and nft. They help to customize the interior look and feel as well as functionality.

Variants

The default variant has everything you need to bridge and swap in a compact view and allows you to integrate the widget wherever you want on your web app's page.

The expandable variant provides a more comprehensive overview of available routes, displayed in a sidebar with slick animation.

The drawer variant can fit nicely on the page's side and has the same layout as the default one.

Default Expandable Drawer To use one of the variants, set the variant option in the configuration.

```

```
Copy import{ LiFiWidget,WidgetConfig }from'@lifi/widget';
constwidgetConfig:WidgetConfig={ // It can be either default, expandable, or drawer variant:'expandable', };
exportconstWidgetPage=()=>{ return(); };
```
```

Subvariants

The default subvariant has the same functionality to bridge and swap in a compact view.

The split subvariant separates mental models and has slightly different views for bridging and swapping experiences with neat tabs on the main page.

The nft subvariant offers a completely new look allowing you to show NFT components and giving you a toolkit to build a complete NFT Checkout flow.

Split NFT Checkout To use one of the subvariants, set the subvariant option in the configuration.

The nft subvariant is currently in BETA. While we've worked hard to ensure its stability and functionality, there might still be some rough edges.

If you are interested in integrating NFT Checkout, please reach out via our [Discord](#) or [Partnership](#) page. ```

```
Copy import{ LiFiWidget,WidgetConfig }from'@lifi/widget';
constwidgetConfig:WidgetConfig={ // It can be either default, expandable, or drawer variant:'expandable', // It can be either
default, split, or nft subvariant:'split', };
exportconstWidgetPage=()=>{ return( ); };
```
```
