

Hi all,

My friends and I recently started [Finsheet](#), which provides financial data for spreadsheet users.

We have real-time and historical price for SCRT and other cryptocurrencies in many leading crypto brokers. For example, these functions would return real-time price of SCRT on Binance and Hitbtc:

- FS_Latest("BINANCE:SCRTBUSD")
- FS_Latest("HITBTC:SCRTUSDT")

These 2 functions would return intra-day (1 hour) price of SCRT from the beginning of today (04/15/22) until now:

- =FS_CryptoCandles("BINANCE:SCRTBUSD" , "60" , "04/15/2022")
- =FS_CryptoCandles("HITBTC:SCRTUSDT" , "60" , "04/15/2022")

Finsheet has comprehensive support for technical analysis. We have both Excel and [Google Sheets](#) add-ons. They are super easy to use and require zero coding.

Since we just launched, the website is totally free right now. You just need to register an account and install the add-on to access all features.

I really appreciate if you guys can check it out and provide any feedback you may have so that we can improve the website better. Thanks in advance.
