

# Happy Clients

We have been the trusted partner for about 20 high profile clients. Here are some of our notable clients:

[Cometh](#): Cometh is a game studio based out of France. They have previously worked with prestigious clients, namely La Française des Jeux (FDJ), Lacoste, FanLive Rugby, and Life Beyond Studios for their web3 needs. Cometh is building a new game called Cosmik Battle with user-friendly biometric wallets and a customizable NFT marketplace on a rollup provisioned by AltLayer.

[Double Jump Tokyo](#): Double jump.tokyo is a blockchain game development studio based out of Japan. They provide web3 game and NFT development services to large-scale enterprises in the gaming & entertainment sector. They have worked with notable partners such as SEGA, Bandai & Ubisoft and own game IPs such as Sangokushi Taisen. Double Jump is also a member of the Japan Blockchain Organisation & Backed by Jump, Circle & others.

[Injective](#): Injective is the only blockchain where developers can find robust out-of-the-box modules such as a completely decentralized orderbook that can be utilized to build a diverse array of sophisticated applications. Moreover, Injective is an open interoperable smart contracts platform. The Injective ecosystem is a network of decentralized applications that focus on providing the best in class user experience. By providing the unrestricted and unprecedented ability to access decentralized financial markets, products, services, and toolings, the Injective ecosystem empowers individuals with the ability to more efficiently allocate capital.

[Deri](#): Deri Protocol is the DeFi way to trade derivatives: to hedge, to speculate, to arbitrage, all on chain. With Deri Protocol, trades are executed under AMM paradigm and positions are tokenized as NFTs, highly composable with other DeFi projects. Having provided an on-chain mechanism to exchange risk exposures precisely and capital-efficiently, Deri Protocol has minted one of the most important blocks of the DeFi infrastructure.

[Automata](#): Automata is a blockchain middleware service provider backed by Binance Labs, Jump Crypto, and others. They recently launched a modular attestation layer with attestation conducted fully on-chain for out-of-protocol computation. The project enables on-chain verification of heavy-weight computation through proof-of-machinehood and uses AltLayer's rollups to achieve scalability.

[ALLO](#): Allo protocol is building novel applications across programmable funds, tokenizing real world assets, trading and staking. This product is being built as an extension of Allocations – a fund management platform with over 1B of assets currently under administration on the platform and backed by Flex Capital, Genesis Accel, Digital Horizon, Whatif Ventures, Garage Syndicate, W5 Group among others. Allo is designed to power a 13 trillion market for alternative assets—including private equity, real estate, art and commodities.
