

walletClientToSmartAccountSigner

Takes a walletClient and returns a custom signer that can be used as a signer with permissionless accounts. This is especially useful when using useWallet from wagmi, allowing for an easy way to plug in custom frontend wagmi signers to permissionless accounts.

Import

```
...  
  
import { walletClientToSmartAccountSigner } from "permissionless"  
  
...
```

Usage

```
...  
  
import { walletClientToSmartAccountSigner } from "permissionless"  
  
const smartAccountSigner = walletClientToSmartAccountSigner(walletClient)  
  
...
```

Returns

SmartAccountSigner

The smart account signer that can be used with permissionless accounts.

Parameters

- Type:
- WalletClient

The viem/wagmi wallet client.
