

Deploying your VRF Instance Deploying your Gelato VRF instance is a straightforward process. Here's a step-by-step guide to get you started:

1. Gather Necessary Addresses

Before you begin, make sure you have the address of your requester contract at hand. This will be essential for the deployment process.

1. Access the VRF Deployment Portal

Navigate to the [Gelato VRF app](#).

1. Choose your VRF Type

When prompted to select the VRF type, opt for "Gelato VRF". If you previously deployed a Chainlink consumer contract and wish to transition, refer to the [Migrating from Chainlink VRF](#) section.

4. Select Deployment Network

Ensure you choose the same network where both your VRF requester and receiver contracts are deployed.

1. Specify the Request Contract

You'll be asked to provide the address of the Request Contract to which the Gelato nodes should respond. Enter the address you gathered in step 1.

1. Launch your VRF Instance

Once all details are correctly entered, go ahead and launch your Gelato VRF instance.
