

Hello guys. Sorry for the extremely noobish question. I'm new here.

I've seen this transaction: 0xaeda23d41e65e28827fa8ed949bfac9cbc8d43ccf8a3bada2b6e32cb689c9c29

And I can't seem to grasp why base and priority gas are so low. Probably has to do with the transfer to Titan Builder.

My question is: when sending a bundle through Flashbots, does it automatically send the priority fees to the miner (hence explaining the transfer to Titan Builder)?

If not, how does the process works?

Thanks for the patience.
