

Hey everyone, I'm James Wang from HashQuark.

HashQuark is the world's leading Web3 infrastructure service provider. We support classic staking services for most of the mainstream public chains including Cosmos, Persistence, NYX, Rizon, SecretNetwork, Juno, Evmos, Sommelier, XPLA, Akash, and Band. In addition to this, we also run validators for other PoS blockchains such as Ethereum, BSC, Polygon, and Polkadot, and provide compliant liquid staking services.

As a core DeFi player, dYdX is building an open platform to empower traders with powerful, transparent, fair and advanced financial products. It's exciting to hear that dYdX v4 will be developed as a standalone blockchain based on Tendermint consensus and built using Cosmos SDK!

We would love to participate as a validator on dYdX v4 and hope to join and contribute to the dYdX community!
