

Hi,

On this [page](#), the following is stated:

#### Timing

The webhook url assigned to your Prediction Nodes are automatically registered with your Numerai Models. Numerai will execute those webhooks on Saturday at 19:00 UTC (an hour after the round starts). If we haven't successfully received ...

However I just got an email for round 288 that the Compute was triggered at 18:10 UTC. This difference makes a difference to me, as I load data to another cloud provider, and I can't guarantee it will load in ten minutes.

So what is the true timing? 19:00 or 18:10 UTC?
