

tomochain-box¶

A truffle box to easily start with smart contract deployment on TomoChain.

Testnet and Mainnet networks as well as the 10 TOMO deployment fee are already configured.

Installation¶

Install truffle and truffle HDWalletProvider.

`npm install -g truffle truffle-hdwallet-provider` Open that truffle box.

`truffle unbox etienne-napoleone/tomochain-box`

Configuration¶

Add the mnemonic of your founded account (more than 10 TOMO) to the `mnemonic` file.

Attention: A `gitignore` was automatically created to ignore the `mnemonic` file. Please be careful to never version it!

Usage¶

Develop your smart contracts, migrations and tests as usual. You can then deploy directly on the TomoChain network of your choice.

`truffle test` `truffle compile` `truffle deploy --network testnet`

or mainnet
