We have to stop thinking like a bunch of weak cowards. We are a tribe, and this is war.

We are long-term investors and UNI believers but if we don't take this seriously then there will be no more rainbows here. Long-term investors get stronger by drinking the tears of short-term speculators. So we need to start rewarding long-term investors by getting serious.

We most certainly need to consider a UNI tokenomics program alongside the proposed buy-back program. We should welcome any sort of mechanism that supports price over time. Anybody who says otherwise is clearly a trojan horse from another community trying to steer us in the wrong way.

I can't say too much, but I know for a FACT that a certain "Rich famous Crypto Twitter personality" has supporters in here who on purpose, are making false misleading suggestions and start conversations to dampen the growth of UNI.

Sushi

are taking risks because they are in second place. They want to take over Uniswap and they are fighting for it. They are not sitting there twiddling their thumbs about "legal issues" and cry baby garbage talk about upsetting the wrong people. Stop listening to these unproductive paper pushers. These are the same people who said Bitcoin was going to \$0 in January 2019 because "the government will not let it go up".

Now... There is room for only 1 king so we need to start acting like it.

We are here for Crypto, but let's not forget the most important fact... Satoshi already solved the "Digital Scarcity" problem

. Stop acting like it's a bad idea to support the Uniswap with scarcity tokenomics such as buyback & burn, as well as incentives to hold the UNI token for longer periods of time.

Clearly it was a mistake to leave the Protocol Fee Switch inactive for 6 months. This is way too long and a thorn in our side.

Nobody is happy about that because the "competitors" are making moves EVERY other day. We have basically let the sheep out for the foxes.

We also need to stop wasting time replying to trojan horse actors who say "GuyZ, BuYBaCkS DoN'T HeLp, AnD BuRnInG DoEsN'T EiTheR!" in every single thread. It's so obvious that these people are from an outside community

and actively trying to take us down from with-in.

As a start, we should be implementing:

1. Staking ...Reward longer lock-up with higher yield.
2. Buy-back and Burn ...There is incentive for holding as the Unicorn is working for us 24/7.
3. UNI hodler access ...Own 25 UNI and you get access to cheaper fees and more trading features such as Stop Market, Limit Orders, Iceberg etc.)
4. Loyalty Rewards ...Instead of 6% yield, you get 7% staking yield if you have been using for a longer period of time.

We should also heavily consider giving Liquidity Providers a payment in the form of slightly higher yield on their Staked UNI Tokens

as this will punish those who keep dumping their bags early, and it will reward long-term views.

It's time to stop playing nice and start working seriously towards total Victory
