

Widget Debugging

Debugging @brinkninja/widgets [Suggest Edits](#)

The @brinkninja/widgets comes with a debugging mode that allows you to see additional values and information for debugging purposes. To enable debug mode, simply add ?brinkwidget=debug to the URL of the web page where the widget is embedded.

Enabling Debug Mode

Simply add ?brinkwidget=debug to the URL. After that, the widget will enter debug mode, displaying additional values and information.

Example

For example, if your web page URL is <https://example.com> and the widget is embedded in the /page route.

Debug mode would be enabled like this:

Bash `https://example.com/page?brinkwidget = debug`

Debug Mode View List

Debug mode currently shows additional values and information in these views: - "My Swaps" view

My Swaps

Enabling debug mode shows an additional dots button where you can see the intent hash. Updated 26 days ago
