How to get integrated by LI.FI?

Are you a bridge, DEX, aggregator, or solver looking to get added into LI.FI routing?

Integration Approach and Prioritization

LI.FI is a neutral, multi-chain liquidity aggregator committed to integrating trusted and secure solutions. We frequently receive requests from decentralized exchanges, bridges, aggregators, and solvers for integration. However, each new integration adds complexity and maintenance requirements, which can impact our ability to support additional projects.

Our prioritization strategy is driven by customer demand. We focus on integrating the ecosystems, bridges, and DEXs that our customers request most frequently.

If your project is selected for integration, you will need to meet the following technical requirements for [Bridges](#) and [DEXs/Aggregators/Solvers](#).

To get the integration started:
