

I am very interested in Ethereum Layer 2 solutions and particularly focused on the development of the Arbitrum ecosystem. I have just launched a football betting product that supports both Ethereum and Arbitrum. The product can be found at www.betball.xyz. I intend to continue developing this project and plan to develop more products within the Arbitrum ecosystem.

Does Arbitrum have any programs that could help developers like me with promotion?

Additionally, I hope to connect with others who share an interest in Layer 2 and Arbitrum ecosystem development.
