Migrate to v3

This guide references the major changes between v2 and v3 to help those migrating an existing app.

Note: When upgrading toprotocol-kit v3, it's necessary to upgrade tosafe-core-sdk-types v4.

The `signTransactionHash()` was renamed `signHash()`

The `signTransactionHash()` method was renamed to `signHash()` to align with the method's purpose. The method is not strictly for transactions, as the parameter is a hash, so the new name is more accurate.

```
_10 // old: _10 protocolKit.signTransactionHash(safeTxHash) _10 _10 // new: _10 protocolKit.signHash(safeTxHash)
```

Type changes

The `SafeTransactionEIP712Args` was renamed `SafeEIP712Args` as the EIP-712 is not exclusive for transactions.
