

Title: [ARC] Whitelist Balancer's Liquidity Mining Claim

Status: Proposed

Author: [@Llamaxyz](#) [@MatthewGraham](#)

Created: 09-09-2022

## Simple Summary

This proposal enables Balancer DAO to retrieve the stkAAVE Liquidity Mining incentives distributed to Linear Pools in the Balancer Boosted Aave Pool.

## Abstract

Balancer DAO seeks to retrieve around 1,500 stkAAVE from several Linear Pools. Balancer DAO accrued this stkAAVE after it deposited liquidity into Aave while Liquidity Mining incentives were being distributed, [1,2].

The Linear Pool's contract addresses are not capable of recovering or managing the receipt of stkAAVE tokens. As a result, governance intervention is required to change the contract address which can call and receive the stkAAVE.

The proposal is to implement the changes required to enable Balancer DAO to retrieve the stkAAVE from the Linear Pools within the Balancer Boosted Aave Pool.

## Motivation

Three Linear Pools within the Balancer Boosted Aave Pool have accrued around 1,500 stkAAVE from Liquidity Mining rewards, [3].

The Linear Pools are unable to call `getUnclaimedRewards`

with `0xba1222222228d8ba445958a75a0704d566bf2c8`

from the below contracts:

- `0x02d60b84491589974263d922d9cc7a3152618ef6`
- `0xd093fa4fb80d09bb30817fdcd442d4d02ed3e5de`
- `0xf8fd466f12e236f4c96f7cce6c79eadb819abf58`

The Linear Pool holds the aTokens and receives the stkAAVE liquidity mining rewards but can not call the `claimRewards` function or manage any stkAAVE if it was received.

Aave enables other addresses to claim on behalf of smart contracts using the `claimOnBehalfOf` function. In order to do this, a specified address must be declared the valid owner of the contract.

## Specification

Set Balancer contract `0x10a19e7ee7d7f8a52822f6817de8ea18204f2e4f`

as the claimer in the incentives controller contract, [4].

## Implementation

Call `setClaimer()` for Balancer contracts on `INCENTIVES_CONTROLLER_PROXY_ADDRESS`

Balancer DAI-aDAI Linear Pool

[InitializableAdminUpgradeabilityProxy | Address 0x02d60b84491589974263d922d9cc7a3152618ef6 | Etherscan](#)

Balancer USDC-aUSDC Linear Pool
