Introduction

I have a deep understanding/experience of markets, being a trader by background. I spent time doing portfolio management and trading in both tradfi (macro) and crypto. Also dabbled in business development.

Motivation

My objective here are two folds: one for the tokenholders, and another for the DAO. For tokenholders delegating their tokens to me, I strive to provide them with well-informed, biased opinions, and to ensure their voices are heard by the DAO. For Lido DAO, I hope to provide honest feedback relatively free of DAO politics, and to contribute to healthy governance system. My actions will align with the interests of delegators and the broader community, and I hope to be a good bridge and sense-maker between the two.

Values and Decision-Making Approach

Simplicity

: think in first principles. I am a strong believer in first principles thinking, especially in a complex ecosystem like DAO where there are different stakeholders and interests at play.

Ownership

: acting with a sense of ownership in Lido. Being an individual delegate, I don't realistically have the time to be involved as a delegate in other DAOs. The lack of conflict of interest will enable me to act in the best interest of Lido.

Public Acceptance

I am fully aligned with Lido's [vibe](#) (purpose, mission, vision), and commit to the [Delegate Code of Conduct](#).

Disclosures

I am not a delegate / contributor to any competing staking projects. I have no conflicts of interests contributing to Lido DAO, but will disclose them should they arise.

Waiver of Responsibility

By delegating to me, you acknowledge and accept that I will participate on a best-effort basis and will not be liable for any damages related to participation in the Lido Protocol or Lido DAO.
