Once 500 ETH is reached, the price discovery phase will begin, during which the token price will continuously increase with each purchase. * Users can share a referral link and claim 2% of all referred user's auction deposits 24 hours after the presale. * Any unsold tokens will be burned.

Token Price Mechanism

The fair launch auction starts with 0.00003846 ETH per RF and total raise of 500 ETH. Once the raised amount exceeds 500 ETH, the price discovery phase starts. During this period, the price of each RF token will increase continuously with every purchase made. $\text{Price} = \frac{\text{Total raised}}{\text{Token supply allocated for presale}}$ The amount of tokens a participant receives may vary due to the boosted farming pool allocation, even if the number of ETH committed is the same. Keep in mind that all participants will obtain RF tokens at an equal final price, which is determined by the fair launch public sale auction's concluding valuation, irrespective of the timing of their participation.

Farming Boost for Velocore POAP Holders
