

I've faced difficulties adding my wallet to my Discourse account. Every time I click on MetaMask (WalletConnect), it redirects me to the iOS App Store to download MetaMask, despite already having it installed on my phone.

Even when attempting to scan the QR code, it still doesn't connect or work. I'm not the only one facing this issue; my friend is experiencing the same problem

"Could you please fix this issue? I'm unable to verify my wallet unless I use an Android device or a laptop.
