

Using the Light SDK

The light sdk exposes the following modules:

```
pub
mod reading; // exposes queries to retrieve data from a Namada node pub
mod transaction; // contains functions to construct all the transactions currently supported by the protocol pub
mod writing; // exposes functions to send data to a Namada node pub

use namada_sdk; // exposes the namada_sdk module for low level interactions with the Namada node
The functions exposed by each of these modules (excluding namada_sdk ) are described in the following sections.
```

- [Reading](#)
- [Transaction](#)
- [Writing](#)

[Setup Reading](#)
