

We want to inform the community that while triggering the AIP for [\[ARFC\] - Chaos Labs Risk Parameter Updates - Aave V3 Optimism - 2023.03.22](#), we matched an incorrect text file. As a result, the text displayed on the governance portal on AIP-205 shows “Supply/Borrow Cap Updates V3 Arbitrum”, while the payload is for V3 Optimism parameter updates. We have reviewed the rest of the AIP and can confirm this was the only issue and nothing related to the parameter proposition is at risk

We rectified this by triggering AIP-206, which includes the relevant text, for the community to vote on.

AIP-205 should be disregarded and will be canceled shortly.
