

Hey everyone!

While executing the "discovery migrate" command I get the following message:

[

image.png

722×218 41.9 KB

](https://global.discourse-cdn.com/standard17/uploads/enigma1/original/1X/aa4681a0331d35b9313fadb4ee367f318de06b55.png)

So this error has already been addressed here: [Problem running discovery test](#)

And the solution was to:

1. To reinitialize discovery to get the EnigmaSimulation.sol
2. The location of the file 'millionaires_problem.txt' which contains the contact address needs to be changes in deployment and the test scripts.

For step 1: Checked whether the 'EnigmaSimulation.json' is in build/enigma_contracts and it is so this would probably confirm that the EnigmaSimulation.sol is compiled.

For step 2: Don't know where to find the file 'millionaires_problem.txt' and what needs to be changed.

Can someone help out with step 2? Perhaps explain what is going on.

Much appreciated!!

PS: I thought it to be useful to create a separate thread for this error even though it has already been mentioned. If there is a more effective way of documenting or a standard I can follow please do advise me on this.
