

Hi everyone, I lead governance initiatives at she256 (<https://she256.org/>) and we're hoping to get involved with Aave as one of our first protocols. We are a 501c3 run by crypto-natives that are dedicated to increasing diversity in the blockchain space. Our approach is to facilitate discussions on new proposals for our community and represent a range of voices in our voting decisions. After an initial call with the Aave team, we were advised to reach out with a formal request for delegation. If anyone here is open to delegating governance tokens to she256, please contact me (I'm on the Aave discord) and we can discuss further. We hope to work with some of you!
